

# Don't Get Left Behind... See If You Meet the Construction Equipment Emissions Requirements

The Clean Air Construction Standard (CAC) will restrict the use of older, dirty diesel non-road equipment, as well as concrete mixers and dump trucks, on public construction sites. Your participation in the reduction of diesel particulate matter emissions will help us all breathe easier; eliminate potential noncompliance fines; and see real time results of your efforts.

All equipment working on a CAC project will need to be registered in CAC's online compliance database:  
**The Yard**

## CAC Phase-In Schedule

This phase-in schedule describes requirements for all diesel-powered nonroad construction equipment greater than 25 horsepower and all on-road dump trucks and concrete mixers used on public construction projects:

Date	Nonroad > 25hp	On-Road
1/1/22	Tier 0 Engines restricted	
1/1/23	Tier 1 Engines restricted	
1/1/24	Tier 2 and 3 Engines restricted	Pre-2007 Engines restricted
1/1/25	Tier 4 & 2007+ only; Retrofit options restricted	

## Schedule your Fleet Assessment Today!

The City of Portland is offering free fleet assessments and compliance plans for COBID certified and small firms in advance of the Clean Air Construction Standard (CAC) requirements beginning January 1, 2022.

### Support You'll Receive

- Review of equipment and vehicles subject to CAC
- Compliance plan indicating date through which your equipment can be used on a CAC site and which equipment can be upgraded for extended compliance
- Equipment inventory that will prepare you for CAC requirements including registration in the CAC database
- Most of the information necessary to apply for future grant opportunities.

Up to \$750 Value
